CURVE
Advanced Cloud-Based Monitoring

Curve™ is a cloud-based monitoring system that remotely connects building owners, service technicians, and facility personnel with real-time information about the operation of their critical spaces. Through Curve™, the user has the power to monitor and control from one access point, allowing for easy access to ensure safety and comfort of the occupants is being achieved at all times.

The platform is easily integrated onto any laptop or computer through a web browser, making Curve™ highly accessible from any location. The user-friendly interface maps all sites on its home page and clearly displays any building notifications, allowing users to quickly navigate to the critical alerts for more information. Curve™ is also available as a phone app, letting users check on their buildings while on the go.

SMART NOTIFICATIONS

Staff on-site can effortlessly check on any active alarms and acknowledge them or request service. Customized notifications can be configured via text or email to ensure the right people are notified when an alarm occurs. Building managers and rep service teams can be connected to building operations in real-time.

CHARTING

All data is tagged for easy charting and analysis. Users can view and export a chart for diagnosing system performance issues or implementing preventative maintenance procedures. New charts can be created at any time using any data since Curve™'s activation, even if the point has not been previously charted.

Web

Mobile

Curve Cloud
Enterprise building management, long-term storage, SP analytics & reporting

Firewall friendly communication (MQTT)

Curve Hub
Local processing, storage, schedules & alarms

3rd Party BACnet Devices

FEATURES

+ Alerts when room conditions are not being satisfied

+ Dynamic reports highlighting KPIs

+ Change schedules with ease

+ Tiered permission levels for different users

+ Centralized navigation

+ BACnet MS/TP or BACnet IP

GRAPHICS

Customizable graphics allow for important information to be highlighted based on the user's requirements and preferences. The integrated graphics editor and database of pre-made images makes it easy for technicians to create what works best for each site.
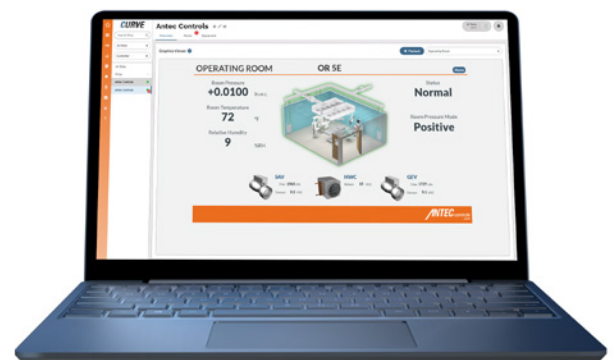

REPORTING

Customizable reports can be automatically sent out allowing users to receive regular updates containing the information that is relevant to them.
