

SecureAire News Release

SECUREAIRE PRESENTS LATEST OPERATING ROOM DATA AT HESNI's ANNUAL MEETING

Oldsmar, Florida, May 5th, 2017

SecureAire presented the results from its latest study on Particle Control Technology which was conducted in a Hospital Operating Room at the recent Healthcare Engineering Society of Northern Illinois (HESNI) Annual Meeting.

"We believe that we are at the forefront of changing the way Indoor Air Quality is viewed in the Healthcare Environment", said the company's CEO and President, Frank Stamatatos.

Dr. Mark Ereth and Don Hess, Chief Technology Officer, presented the company's most recent results by applying Particle Control Technology to an Operating Room. The study, conducted over a month long period, provided significant reduction of airborne contaminants without any major change to the existing HVAC system. According to Dr. Ereth, "All hospital patients are at risk for hospital acquired infections with the many who are immune compromised at even greater risk. Thus we believe that there is no safe threshold for airborne pathogens and contamination."

SecureAire has developed revolutionary technology that will change the way people think about Air Purification and Filtration solutions in Healthcare. Having the ability to both Capture and INACTIVATE™ Airborne Pathogens is a critical step in helping to reduce infection rates throughout Hospitals.

Mark Ereth, MD, Emeritus Professor of Anesthesiology, Mayo Clinic College of Medicine, Co-Founder and CEO, APRI Health, Inc.

Dr. Ereth is an internationally known expert in anesthesiology, transfusion, platelet function, and blood management who is a frequent speaker at medical schools and hospitals around the world. Dr. Ereth's career has been marked by innovation and collaboration. In his 25 years at the Mayo Clinic he provided anesthesia and critical care to over 10,000 patients and authored more than one hundred peer reviewed journal articles and abstracts. He holds multiple patents for medical devices and upon retirement from the Mayo Clinic he founded APRI Health, Inc., where his team focuses on novel analytic solutions to common problems of patient safety and over-utilization.

About SecureAire: SecureAire was founded in 2004 and is headquartered in Oldsmar, Florida. The Company is rapidly becoming the industry leader in **Particle Control Technology**, which is based upon technologies developed and employed by Semiconductor Cleanrooms. SecureAire has advanced and further developed a number of highly sophisticated air purification technologies that make "*air flow the dominant transport mechanism for airborne contamination.*"
